ADX: what is built, what is next, and where the gaps are

Written 2026-10-19 from the code, `docs/reference.md`, `docs/architecture.md`, `docs/screens.md` and the build ledger in `docs/build/`. The market and gaps sections (4 to 6) were revised 2026-10-31 from vendor pages read that day, adding the CRM suites, the platforms' own tools, the creative tools and the UAE portal and broker tools; every figure a vendor gives about itself is a claim, not a result we checked.

One sentence on state: every capability below runs locally against real core, temporary SQLite databases and fake providers, with its pass conditions as tests, and none of it is live. Nothing has touched a real ad account, a real lead, a phone or a customer, because the credentials, policies and approvals that would let it have not been supplied. The "What live use needs" table in `docs/build/capability-matrix.md` lists them.

1. What ADX is

A marketing tool for Reportage, built as three sub-products behind one Home. **Create** takes a project from brand facts to a live campaign. **Perform** keeps money well spent. **Convert** takes leads through the funnel and talks to them. Underneath sit a supervisor, a workflow engine and a policy layer, so that any change ADX wants to make outside itself goes through a proposal a person approves, under caps and a kill switch.

Nobody else in the market ties spend on Google and Meta, by campaign, to leads in GoHighLevel, to qualified leads and to Done-Deals in AED, with the match level and coverage shown next to every figure. That is why ADX exists.

2. Built

Grouped by door. "Local" means proven by tests in `make test`. "Live needs" is the exact input that would make it real.

Home and the assistant

Capability	Local	Live needs
Home desk: greeting, summary line, attention cards picked by the server, "Talk about this" questions, prompt pills	Yes, cards still from sample fixtures	Metrics engine and model wired to the fronts endpoint
Ask ADX: read-only grounded assistant over allowlisted tools; every number from a calculation, a write-shaped request refused; model outage returns a retryable state	Yes	Anthropic API key and the data-use approval for sending aggregated figures to a model
Spoken turns: browser speech to transcript, previewed before sending, actions named but never executed	Yes	Nothing
Inbox: everything that needs a person, worst first, then updates; snooze and dismiss; Present mode plays the same cards on a wall	Yes, on sample data	Same as Home

Create

Capability	Local	Live needs
Brands, projects, versioned offers, facts classified approved or inferred, price conflicts held for an admin	Yes	A precedence rule for price and inventory facts
Brand kit per project: logos, fonts, colours	Yes	Nothing
Research briefs: market, competitor, SEO and customer, from public pages and Google keyword estimates, private addresses refused, every finding sourced	Yes	Google Cloud OAuth client with Google Ads API access
Recurring research: refresh runs, monthly comparison reports, hypotheses that stay hypotheses until reviewed	Yes	Nothing
Media plans: typed, immutable versions; allocations must total the budget; model-drafted versions pinned to the frame and stripped of uncited figures; diff and revision impact; acceptance grants no spend	Yes	Model key; Reportage's Excel template for the exact-template export
Creative production: four sizes, English and Arabic, with and without CTA; house rules (no discount above 15%, every discount shows its condition, logo top centre, Arabic flagged for native review); render as a durable run with provenance	Yes	Nothing
Review board: public link, approve or ask for changes, pinned comments; a review belongs to the version it was given on, so an edit clears approval	Yes	Nothing
Claims check: creative copy checked against approved facts before readiness	Yes	Nothing
Landing pages: server-rendered, scoped forms, test submissions that never count, rollback that names the old version, readiness	Yes	Which host each page family lives on and an external publishing adapter
Measurement: events, tracked URLs, controlled checks, launch readiness that joins plan, assets, pages, accounts and checks	Yes	A connected Google Ads or Meta account for the account gate
Launch: each plan line resolved to create, update or pick an existing campaign, netting this month's spend off the line; proposals created for the result	Yes	The write gate below

Perform

Capability	Local	Live needs
Connections: GoHighLevel by private token (OAuth path exists), Google Ads and Meta by OAuth, one account stored once with currency and time zone, health per account, a failing account does not stop the others	Yes, GoHighLevel reads proven against a test location	Google Cloud OAuth client; Meta Business app id and secret
Capability matrix: every connector shows what it reads, what it writes under policy and what it never does, with the reason	Yes	Nothing
Metrics engine: minor-unit money, Dubai reporting day, source grain, match coverage, formula version, comparisons against previous, custom and year-over-year periods; missing figures are null, never zero	Yes	Live reads
Analytics, Campaigns, By project, Revenue, Portals, Marketers screens	Yes, wired to typed results	Live reads; Done-Deal value in GoHighLevel for Revenue

Capability	Local	Live needs
Reports and schedules: daily, weekly, monthly, quarterly, with coverage and delivery state, no duplicate occurrence	Yes	SMTP host, sender, recipients
Alerts: cost spike, zero-lead day, stale ingestion, pacing, with eligibility rules so stale data is never reported as zero leads	Yes	Thresholds from Abdul and the CMO
Proposals: old value, new value, reason; policy check; approval bound to the target version; atomic budget reservation from envelopes; execution outbox	Yes	Caps and write privileges per account in the policy document
Execution: Google Ads and Meta write adapters for budget raise or lower and pause; outbox dispatcher with marker reconciliation so a timeout never creates a duplicate; recovery after restart; compensation that never claims spend back; launch timeline and milestones	Yes, against fakes of the documented responses	An account enabled for writes, a test account, `ADX_LIVE_WRITES=1` and written approval
Guardrails: policy per actor, workspace, account and action; daily caps; kill switch that proposals, sends, field writes, workflows and calls all obey	Yes	Nothing
Data quality: lead coverage, status coverage, attribution coverage	Yes	Live lead import

Convert

Capability	Local	Live needs
Lead import from GoHighLevel, versioned status-to-stage and project and source mappings, unknown statuses kept and flagged, campaign match confidence recorded	Yes	Private token for the ADX Test location; which GHL field holds the status; the stage table
People and enquiries: conservative matching, shared phones never auto-merge, reversible links and merges, enrichment kept apart by class	Yes	An enrichment provider with a contract
Signals and scoring: fit and intent under versioned rules, half-life and damping, unknown identity excluded, corrections with history, temperature thresholds; GoHighLevel webhook for stage and message events	Yes	`ADX_WEBHOOK_SECRET` and a GoHighLevel webhook; rule values confirmed by an admin
Sales brief with a rule-based next step; objections; drafts quoting approved facts only	Yes	Nothing
CRM field outbox: ADX writes its score into fields it owns, tells an echo from an outside edit, conflicts held	Yes	`ghl.lead_fields.set` allowed and `ADX_LIVE_WRITES=1`
Outreach adapters: WhatsApp Cloud (plain text in the 24-hour window) and SMTP, sends gated by suppression, channel mode, quiet hours and approval	Yes	Reportage's messaging policy and the credentials
Calls: versioned calling policy, contactability checks, atomic reservation so simultaneous requests ring once, unknown results reconciled not retried, signed callbacks, recording retention; Twilio reference transport	Yes	A chosen UAE route authorized in writing, and Reportage's written reversal of "not open to automated calls"
Qualification conversations: ElevenLabs agent over the call stream, barge-in, transcript as evidence, reading applied once per version and only when trusted, uncertain figures held, corrections	Yes	ElevenLabs key and an agent set to `ulaw_8000`, plus the route above

Capability	Local	Live needs
Native pipeline: one opportunity per enquiry, owned stages, versioned edits that collide instead of overwrite, follow-up tasks, interactions, previewed resumable import from the lead copy	Yes	Nothing
Evaluation ledger: one agreed label per call, agreement and correction rates, predictive claims off until 50 labelled calls at 80% agreement	Yes	Labelled calls

Workspace and agents

Capability	Local	Live needs
Registry of skills, agents and workflows: immutable versions, schema-checked outputs, bounded graphs, admin needed for anything that widens access or was model-written	Yes	Nothing
Workflow engine: leases, once-only external steps under an operation key, downstream invalidation on corrected input, bounded loops, token budgets, the only outside effect is a proposal	Yes	Model key for the runner
Supervisor: one inbox over every domain, autonomy modes per capability with daily caps (recommend is the default), arbitration by configured precedence or escalation, non-retroactive policy	Yes	Reportage's objective names
Learning: advice, decision, action and delayed outcome kept apart; outcomes attach to the intervention whose window covers them; insights promoted only on observed outcomes and a controlled comparison; model agreement counts for nothing	Yes	Nothing

Platform and settings

Capability	Local	Live needs
Sign-in through authentik OIDC, memberships per workspace, sessions end on disable, dev admin only in dev mode	Yes	`adx-auth` client from IT
Workspaces: full client isolation, same-named projects and provider ids across clients, workspace switching, versioned industry configuration	Yes	authentik for two memberships in a browser
Deployment, readiness, encrypted credentials with the key outside the database, backup and linked-state restore, retention pruning, release script that rolls back if readiness fails	Yes	Server access, hosting approval, a retention period
Metered model cap server-wide, cost view against budgets, model release evaluation with regression-blocked promotion, load harness	Yes	A model key to have anything to meter
Design language: ink on paper tokens, square corners, Outfit headings, collapsible sidebar, status chips, theme toggle	Yes	Nothing

3. In the pipeline

Three kinds of work are queued, in this order of nearness.

Finishing the app on the engine

The designed screens are being rewired from sample fixtures to the engine's endpoints and types, one screen at a time, with the engine twin removed after each. Since 2026-10-19 Projects became the main section, with Brand, Media, Studio, Measurement and Campaigns per project, each showing its state,

health, next step, what waits on a person and a Fix link; Launch runs on the launch API over the plan's period; Creative is its own door; Perform and Convert screens are wired. Screens still carrying a Sample chip: Home and Inbox, whose cards wait on the project progress and Needs-you data the server already computes; Analytics shows the label only while its mock flag is on. Connect GHL and the stage table still import legacy types, and the engine's plain screens stay under /engine until each designed screen is rewired. Also open from the pilot gate: pixel export (PNG or JPG) instead of SVG and the canvas drag editor. Perform and Convert have not yet moved under the project frame.

Going live

The largest item, and none of it is code. Each row needs a person outside the codebase.

Input	Who	Unblocks
Hosting approval naming the server location; server access	Reportage IT	Deployment
authentik client, redirect URI, groups scope	IT	Sign-in
GoHighLevel private token for the test location; the status field and stage table	Reportage GHL admin, Abdul	Lead import, stages, qualified leads
Google Cloud OAuth client with Google Ads API access; Meta Business app	Reportage IT	Live reads, keyword ideas, conversion-action checks
Caps and write privileges per account; a test account; written approval; `ADX_LIVE_WRITES=1`	Abdul, CMO	Any external write, the launch journey
Model API key and data-use approval	Abdul	Assistant, plan drafting, call readings, workflows
SMTP host and sender; recipients; anomaly thresholds	IT, Abdul	Reports, alerts, email outreach
Messaging policy and WhatsApp Cloud credentials	Reportage	Sending approved drafts
A UAE telecom route and the written reversal on automated calls; ElevenLabs key	Reportage	Qualification calls
Excel media-plan template	Reportage	Exact-template export
Done-Deal value and date as real fields in GoHighLevel	Akarati	Revenue and return on ad spend

Deferred features

Wanted and recorded in `architecture.md`, not started.

- Automated actions: running approved kinds of change without asking each time. Waits on proposals proving reliable.
- Portal connections: pulling Bayut, Property Finder and Property Guru spend and listings, and portal sync-gap reports. Spend is typed in by hand today.
- Organic reporting and posting: Instagram, Facebook, LinkedIn reach and engagement, Search Console. Posting behind approval.
- Website: GA4 traffic, landing page performance, broken or gated pages. PostHog on Reportage's sites so history builds.
- Website signals and the page catalogue: tying visits to leads is still open. 61% of leads never visit the site.
- Call tracking on the 800 number, so telesales leads get a source. Telesales closed the most deals per lead in September.
- Creating campaigns and ads through ADX. Writes today are budgets and pauses.

- Audiences and outcome sync: hashed lists to Meta and Google, qualified leads and Done-Deals back as offline conversions. The actions are named in policy so they can be denied; the adapters are not built because Reportage has not supplied a data-processing basis.
- Stock-aware ads: flagging ads for sold-out unit types from an Akarati availability snapshot.
- Leadership reports packaging the monthly figures for the CMO and CEO.
- Marketer performance by source owner is wired; approval rights for a team under the Head of Marketing & AI are not.
- MCP OAuth server so Claude can use ADX's tools from outside.
- Editing the permission checklist in-app with per-person overrides; currency conversion; a richer pipeline board than stage and owner.

4. Who else is solving this

No product on the list does what section 1 describes. Each takes a slice. Grouped by the slice, with what each does and does not do. Vendor figures are the vendor's. Prices are list prices in USD a month unless stated, read 2026-10-31; where a vendor's own pages disagree, or the figure comes from a third party, the row says so.

CRM and marketing suites

Reportage already pays for GoHighLevel, so its Workflows and Ad Manager are the nearest substitutes for anything ADX defers.

Product	Does	Does not
GoHighLevel	Visual Workflows across SMS, email, calls and WhatsApp; Ad Manager creates and manages Meta, Google and LinkedIn campaigns; Ask AI for copy and images (AI Employee at $50 or $97 a sub-account, or pay per use); WhatsApp at $10 a sub-account; audit logs with before and after values kept 60 days; source attribution per contact. $97 to $497.	Scoring beyond a Contact Engagement Score; aggregate attribution (an open item on its ideas board); any approval step in Ad Manager or Workflows.
HubSpot Marketing Hub	300 workflows on Professional, 1,000 on Enterprise; ads for Google, Meta, LinkedIn, TikTok and ChatGPT with hourly audience sync and 5 to 15 retargeting audiences; multi-touch revenue attribution; Breeze assistant on credits; lead scores, AI-built on Enterprise; content approvals that block publishing (Enterprise); 75 to 100 dashboards. Professional $800, Enterprise $3,600, plus onboarding at $3,000 and $7,000.	Approval of ad changes; SMS outside the US and Canada; calling (that is Sales Hub); a CRM that is not HubSpot.
Salesforce Marketing Cloud	Multi-channel journeys in Flow; campaign attribution; Campaign Agent for content and, on Advanced, whole campaigns; SMS, WhatsApp and RCS on Advanced; rules-based scoring. Growth $1,500 and Advanced $3,250 an organisation, yearly.	Native ad creation; Advertising Studio is retired (non-renewable from 15 August 2026 per Salesforce Ben, not confirmed on Salesforce's own pages) and paid-media optimisation sits in a $10,000 a month Marketing Intelligence add-on; native calling.

Autonomous ad optimisation

The ads side ADX has to match at minimum is Ryze (D-05).

Product	Does	Does not
Ryze AI	Builds campaigns, writes copy, shifts budgets and pauses waste on Google, Meta, TikTok, LinkedIn and Pinterest; competitor ad library; AI-visibility tracking; SEO fixes deployed and re-measured; Claude and Grok connectors. $89 a month (read 2026-10-19).	CRM, lead scoring, any link from spend to a deal. Claims a 3.2x ROAS lift we could not verify.
Meta Advantage+ and Google Performance Max	The platforms' own agents: Advantage+ budget, audience and placements; Smart Bidding; automated rules; Conversion Leads through the Conversions API from CRM stages (needs instant forms and about 200 leads a month); enhanced conversions for leads with value bidding, uploads moving to the Data Manager API from 15 June 2026; generative text, image and video assets reviewed before publish (Google in English and six EU languages); Demand Gen lookalikes became suggestions only from March 2026. Free with spend.	Anything outside their own account; a plan; a reason on record; a lead's quality past what the CRM feeds them.
Smartly.io	Predictive Budget Allocation shifts budget to top campaigns and channels; Triggers pause and scale; "fatiguing soon" and "fatigued" creative flags with suggested swaps; AI Studio for creative volume; one dashboard across Meta, Google, TikTok, Pinterest, Snap and CTV. No public rate card; third parties report 3 to 5 percent of spend with a floor near $4,000 to $5,000.	Lead-side anything; published caps or approval.
Madgicx	Meta-first rules in real time; AI Marketer with "autonomous execution or a human-approved workflow", the only approval mode in this group; Creative Insights tracks fatigue over time; One-Click Report over Meta, Google, GA4, Shopify, Klaviyo and TikTok; Tracking Pro server-side at $49 an account. From about $99, shown in-app.	Google depth, CRM, cross-channel plan.
Birch (was Revealbot)	Rules on Meta, Google, Snap and TikTok checked every 15 minutes to 72 hours, with a frequency cap per action; alerts to Slack, email and webhook; custom and lookalike audience builder on Pro. Essential $49, Pro $99 (rules on Pro), Enterprise custom.	Creative, CRM, outcomes, offline conversions.
Albert.ai	Fully autonomous bids, budgets, targeting across search, social, programmatic, no per-action approval. Enterprise minimums.	Auditability; reviewers say decisions are hard to override granularly.
Optmyzr, Marin	Single-channel optimisation with recommendations queued for a person.	Cross-channel, CRM.

Creative generation

None carries house rules such as a discount cap, bilingual layout rules or a version-bound review. None is tied to approved facts, to a media plan, or to landing pages in the same tool. None makes the loop from performance back into the next concept explicit.

Product	Does	Does not
AdCreative.ai	Image and stock-style video; brand kit; scores creatives before spend (claims above 90 percent accuracy); Competitor Insights over Meta and Google best ads with traffic estimates; pushes creatives to connected ad accounts and pulls their performance. $39 to $999, with figures that disagree across its own pages and no live pricing page.	Compliance checks; Arabic or right-to-left named anywhere.

Product	Does	Does not
Pencil	Text, image and video agents on Veo, OpenAI, Adobe, Runway and Stability; brand standards with role permissions and, on Pro, AI governance; performance predictions from Core up; launch and tracking on Facebook, Instagram, TikTok, YouTube, Google Display, DV360 and LinkedIn; feed-driven variants on Pro. Core $14, Growth $55, Pro custom.	Competitor insights outside a closed-beta Foreplay integration; Arabic confirmed.
Jasper	Image Suite and pipelines; Jasper IQ brand voice, style and visual guidelines; a Brand Compliance Diagnostic over public content. Pro $69 a seat, Business custom with a 12-month minimum.	Video; scoring; publishing; Arabic confirmed (the language list sits behind a login).
Canva Magic Studio and Grow	AI image, video, animation and translation; Brand Kits (5 to 1,000 by tier) with approvals on Business and up; Grow bulk-publishes to Meta, TikTok and LinkedIn as paused ads, 50 at a time, and reads Meta insights; Arabic in Magic Write. Pro about $12 and Business about $21 a person on yearly billing.	Google publishing; predicted performance.
Omneky, Creatify, Arcads	Static and video variants at volume (read 2026-10-19).	House rules, approved facts.
Luxury Presence Ad Engine	Real-estate specific: ad copy in a brand voice, agents approve before anything goes live, runs Facebook, Instagram and search with budget allocation. Price not public, US agents.	Image or video generation; developers; the UAE.

Attribution and outcome sync

Product	Does	Fit for Reportage
Hyros	Long attribution windows, 30+ CRM integrations, built for high-ticket call-and-CRM funnels. Quote-driven pricing, aimed at $50k a month and up.	Closest in shape, but generic; no GoHighLevel stage logic, no match levels.
Cometly, LeadJourney, Ruler Analytics	Offline conversion tracking for lead-gen, deal-stage events pushed back to ad platforms, CRM sync by webhook.	The feature ADX has deferred under Outcome sync.
SourceLoop	Real-estate specific: ties leads to the producing channel and sends qualified and closed leads back to Google, Meta and LinkedIn as offline conversions.	Direct overlap with ADX's Outcome sync and Revenue attribution. US residential market.
Triple Whale, Northbeam	Ecommerce and media-mix modelling.	Not a fit.

Lead follow-up and qualification

Product	Does	Does not
GoHighLevel itself	Conversation AI for first-touch on SMS and chat, Voice AI agent for inbound and outbound (beta outside the US), AI decision nodes in workflows, an Ad Manager.	Scoring that explains itself, spend-to-deal, version-bound approval. Reviewers warn Conversation AI "gets creative" with knowledge it should not have.
Kommo	WhatsApp-first CRM on the official Business API, Salesbot no-code automation, VoIP and call-recording integrations, several numbers a plan. $25 to $45 a user on six-month prepay, Meta conversation fees extra.	Inventory, portal feeds, planning, approval.

Product	Does	Does not
Lofty (was Chime)	All-in-one: IDX site, CRM, ad lead generation, AI agents for engagement and transaction coordination (Lofty AOS, February 2026). From $449 a month.	UAE off-plan, developers rather than agents.
Ylopo, Follow Up Boss, CINC	Remarketing and nurture for US agents; case studies on closed deals attributed to remarketing.	Developer marketing, Arabic, portals.
Structurely	Text-first qualification within minutes of lead capture, hands warm leads on.	Voice, ads, attribution.
Conversica	Conversational sales assistant. No current detail found.	

UAE and real estate specific

Every tool here is a portal product, a developer-to-broker network or a brokerage CRM. None plans media, makes creative under approval or attributes spend. Their strengths sit squarely on ADX's deferred list: portal feeds and listing sync, broker distribution, unit availability, WhatsApp automation, call recording and Trakheesi compliance.

Who	What	Why it matters
Property Finder	PF Expert; agency-wide call tracking with recordings exposed to CRMs; a verified New Projects catalogue with a developer directory; Trakheesi number verification on every listing; an AI assistant for buyer enquiries. Developer packages are quote only.	Owns the portal lead and the portal data ADX cannot connect to yet; records calls ADX does not see.
Bayut and dubizzle	Off-plan hub of 1,500+ projects with Available, Sold and TBC per unit; agents express interest to developers (DevConnect); a pay-per-lead New Project Leads Marketplace priced per project, location and developer; leads reported by channel including WhatsApp; TruBroker requires call and WhatsApp tracking; Madmoun QR on listings.	A second paid lead source beside Google and Meta, and unit availability ADX wants for stock-aware ads.
Reelly, Alnair	Developer-to-broker distribution: Reelly claims 30,000+ active UAE agents, Alnair 10,000+ brokers with project data by API; real-time availability, payment plans and floor plans; commission tracking and automated contracts; Alnair's basic package about $10,000 a year (search snippet only, page unreachable).	Brokers close most off-plan sales; ADX is the developer's own marketing and does not reach them.
PropSpace, Bitrix24 apps (OIA, PropBridge), Zoho CRM	Property Finder API with email, call and WhatsApp leads auto-logged and recordings; syndication to 80+ portals; two-way listing sync to Property Finder, Bayut and dubizzle with duplicate detection; off-plan inventory module; RERA forms and Ejari in-app; bulk Trakheesi validation; Zoho PhoneBridge over 25+ telephony vendors with Arabic UI. PropSpace AED 220 a user; OIA $75 to $199; Zoho from $20 a user.	Brokerage CRMs with the portal plumbing ADX defers.
Brightcall, SleekFlow, Gallabox, Verloop	WhatsApp-first qualification bots for Dubai brokers: budget, unit type, community, timeline, payment method; hot leads to an agent on WhatsApp within minutes; Arabic and English. DAMAC's Verloop case study claims 2x conversion against lead-gen without messaging.	WhatsApp is the buyer's channel here. ADX has outbound WhatsApp only, no inbound, no templates.
Mira Developments	A WhatsApp assistant holding inventory, pricing and floor plans across all projects.	A developer already doing what ADX's approved-facts drafts would do, live.

Who	What	Why it matters
Dubai Land Department	DLD Investor AI Assistant with Google Cloud: transaction trends, price appreciation, developer track records. Trakheesi permits required on every listing; Madmoun QR mandatory on ads since April 2023; portals remove listings without them.	Market data ADX's research briefs do not read, and a compliance step ADX does not have.
Google Ask Advisor, Meta Advantage+ and Andromeda	The platforms' own agents now do bids, budgets, placements and audience expansion. Ask Advisor reasons across Ads, Analytics and Merchant Center.	Tools that only adjust bids inside one platform are the most exposed. ADX's bets are on cross-platform truth and the lead side, which the platforms cannot see.

Not similar products, same problem

- Agencies and in-house teams with Looker Studio, Supermetrics or spreadsheets, stitching platform exports to CRM exports monthly. This is what Reportage does today, and what every competing developer most likely does.
- Marketing automation suites (HubSpot, Salesforce, Klaviyo) that assume the suite owns the CRM and the inbox. Reportage's CRM is GoHighLevel and the lead inbox is WhatsApp. The suites are compared above all the same, because their Workflows and ad tools are what a team reaches for when a feature is deferred.
- "Agentic marketing platforms" (Auxia Agent Studio, Blueshift, Netcore) selling autonomous campaign agents to consumer brands. They answer the autonomy question the other way: fewer approvals, not safer ones.

5. The gaps

Three lists: what we have that nobody else does, what others have that we do not, and where nobody is.

Where ADX is ahead

1. Spend to lead to qualified lead to Done-Deal at campaign level, with match levels, coverage, and null instead of zero. Hyros and SourceLoop come nearest and are generic or US-residential.
2. Governance built in. Every outside write is a proposal with old value, new value and reason. Approval is bound to the version it was given on. Policy is non-retroactive. A kill switch every entry point obeys. A supervisor inbox over all of it. Albert, Ryze, Smartly and Birch act first and let you audit later. Madgicx has an approval mode for Meta only. HubSpot approves content, not ad changes. Optmyzr queues recommendations but has no policy model.
3. Numbers that come from calculations, never from the model, and a predictive-claims gate that stays shut until the evidence exists. No competitor states this rule.
4. Arabic and English creative under house rules with claims checked against approved facts and a review that dies with the version. Of the creative tools, only Canva names Arabic at all.
5. A native pipeline with explainable fit and intent scoring, corrections with history, and a brief per enquiry. GoHighLevel's scoring is a black box; Lofty's is agent-side; HubSpot's AI scores are Enterprise only.
6. Evidence-gated learning: an outcome attaches to the intervention that preceded it, and model agreement counts for nothing.
7. Multi-client isolation from day one, so a second developer or an agency account costs no re-keying.

8. A media plan with pacing and alerts across both platforms. The suites report spend; the optimisers move it; none plans it against a budget and a period.

Where others are ahead, or ADX is missing something

Ordered by how much it would matter to Reportage in the first quarter of use.

#	Gap	Who has it	Why it matters	Where it sits with us
1	Nothing is live	Everyone	A product proven only against fakes has no users	Section 3, Going live
2	Inbound WhatsApp: two-way conversation, templates outside the 24-hour window, bilingual first-touch within minutes	SleekFlow, Gallabox, Verloop, Brightcall, Kommo, GoHighLevel Conversation AI, Mira Developments	WhatsApp is how Dubai buyers want brochures and answers; Reportage runs WhatsApp campaigns by hand; Reportage said no to automated calls, so text-first qualification fits where voice does not	Decided as the next Convert build (BD-69, 2026-10-21); needs the messaging policy and a template catalogue
3	Speed to lead	Structurely, GoHighLevel, every UAE bot vendor	The deals are lost between lead arrival and first contact, not for lack of leads	ADX's next-step rule waits a day for a hot lead; no instant first touch
4	Nurture journeys: multi-step sequences across email, SMS, WhatsApp and calls	GoHighLevel Workflows, HubSpot, Salesforce Flow	A lead that goes quiet gets a sequence, not one draft	Rule-based next step and single approved drafts only; GoHighLevel's Workflows are the substitute today
5	Outcome sync: qualified leads and Done-Deals back to Google offline conversions and Meta Conversions API, with click ids for match quality	SourceLoop, Cometly, Ruler, LeadJourney, Madgicx Tracking Pro, Meta Conversion Leads and Google enhanced conversions natively	It is the only way the platforms learn what a good lead is; without it Advantage+ optimises for form fills	Deferred; blocked on a data-processing basis from Reportage (BD-70 proposes consent at collection, awaiting counsel)
6	Audiences from CRM state	Madgicx, Ylopo, HubSpot hourly sync, Meta and Google natively	Cold-lead remarketing is what Ylopo's case studies attribute most closed deals to	Deferred, same blocker as 5
7	Portal connections: spend, listings, lead sync gap	Property Finder and Bayut tools, PropSpace, Bitrix24 OIA and PropBridge, Lofty for its market	Portal leads are a large share and their spend is typed by hand	Deferred
8	Trakheesi permit numbers and the Madmoun QR on every ad	Portals enforce it; PropSpace validates permits in bulk	A missing permit gets a listing removed; the QR has been mandatory since April 2023	Not handled; needed before ADX publishes pages or creatives for off-plan ads

#	Gap	Who has it	Why it matters	Where it sits with us
9	Pay-per-lead marketplaces and broker distribution with live availability	Bayut New Project Leads Marketplace, Reelly, Alnair	A second paid source, and brokers close most off-plan sales	Not planned; ADX is the developer's own marketing. The marketplace would enter as a source once portals connect
10	Revenue is null	Any CRM with a deal value field	ROAS stays "Not available" until Akarati sends value and date	Blocked on Akarati (#35); Akarati's GoHighLevel connection goes live 2026-11-14 (D-28)
11	Call tracking on the 800 number	Property Finder call tracking, Zoho PhoneBridge, GoHighLevel phone numbers	Telesales closes the most deals per lead and has no source	Deferred
12	Website and organic: GA4, Search Console, PostHog, Instagram, Facebook, LinkedIn	Ryze, Supermetrics, the platforms	61% of leads never visit the site, so this is lower; but organic is a marketing team function with no view	Deferred to phase 6 screens
13	Channel breadth: TikTok, Snapchat, LinkedIn, Pinterest, programmatic	Ryze, Birch, Albert, Smartly, HubSpot	Reportage buys Google and Meta; Snapchat and TikTok are real in the UAE off-plan market	By decision (D-06); revisit when the team spends there
14	Creative generation: AI image and video, variants at volume, predicted performance	AdCreative.ai, Pencil, Canva, Omneky, Ryze, Madgicx, Smartly, Meta and Google natively	Volume of variants is what Andromeda rewards	Not built by decision; template layout only, never labelled as AI. Pixel export and canvas drag editor also open
15	Creative fatigue prediction	Smartly, Madgicx	Swap a creative before cost per lead climbs	Performance is read back; prediction gated until labelled evidence exists
16	Publishing ads and posts from the tool	Ryze, Omneky, AdCreative.ai, Pencil, Canva Grow, every suite	Saves the hand-off step	Never, by decision; a reviewed asset is handed to a person
17	Campaign creation through ADX	Ryze, Albert, GoHighLevel Ad Manager, HubSpot Ads	Launch today resolves plan lines to proposals; the create write exists for a paused campaign only	Deferred; writes start with budgets and pauses
18	Automated actions for approved kinds of change	Ryze, Albert, Birch rules, Smartly Predictive Budget Allocation, Madgicx	A daily budget nudge should not need a click every morning	Deferred until proposals prove reliable; the autonomy modes already exist
19	Competitor ad intelligence	Ryze ad library, AdCreative.ai Competitor Insights, Madgicx	Knowing what Emaar and Binghatti run	Set aside: Meta's Ad Library returns political ads only for the UAE. No source

#	Gap	Who has it	Why it matters	Where it sits with us
20	Market data: DLD transactions, price trends, developer track records	DLD Investor AI, Property Finder, Bayut	Research briefs read public pages and keyword estimates only	Not planned; a DLD or portal data source would add it
21	Forecasting and scenarios: ROAS forecast, budget scenarios, media-mix	Northbeam, Madgicx, Ryze	Leadership asks "what if we moved 20% to Meta"	Pacing projection only; predictive claims gated by design until labelled evidence exists
22	SEO execution and AI-visibility tracking	Ryze	Reportage's site ranks for its own projects; GEO is new	Research only
23	Keyword research database	Semrush, Ahrefs	Keyword ideas come from Google's planner only	By decision; read the platform, name the source
24	Buyer-facing tools on landing pages: payment plan and mortgage calculators, inventory and floor plans	Mira's assistant, portal pages, Dubai proptech	Expected on UAE developer pages	Pages have forms only
25	Enrichment	Clearbit-style vendors, Lofty	Who a +971 lead actually is	Contract exists; no provider chosen
26	Multi-touch attribution dashboards	HubSpot, Salesforce	Leadership sees which touch produced the deal	Campaign-reference attribution with match levels; no multi-touch model, by design until click ids flow back
27	Multi-currency, scheduler UI, drag-and-drop board, per-person permission overrides	Everyone	Convenience	Deferred by decision; cheap when asked
28	External access for other AI clients (MCP OAuth)	Ryze ships Claude, Grok and Cursor connectors	D-19 said MCP comes first; the OAuth server is not started	Remaining item under B0.3

Where nobody is

White space that ADX could own, ranked by how little extra building each needs.

1. Spend to Done-Deal for off-plan developers, whose cycle runs 30 to 180 days, through GoHighLevel and the portals, in AED and Dubai time. Every attribution tool is built for US residential agents or ecommerce.
2. Governed autonomy: recommend by default, approval per capability with caps, a kill switch, non-retroactive policy, and a learning ledger that only promotes on observed outcomes. The market sells dashboards or autopilots, and nothing between them with an audit trail.
3. Bilingual creative compliance tied to approved facts, for a market where a wrong price or an unconditional discount in Arabic is a regulatory problem.
4. A qualification agent whose reading is evidence first and fact second: uncertain figures held, corrections re-applied with history, quality measured against agreed labels before any claim. Every voice vendor claims qualification; none shows its agreement rate.

5. One supervisor inbox over ads, pages, CRM fields, calls, workflows and conflicts. GoHighLevel has a conversations inbox; nobody has an operations inbox for a marketing team.

6. What this suggests

Questions for Abdul and the CMO, in the order the gaps suggest. Item 2 was decided on 2026-10-21 (BD-69); the rest are open.

1. Push the live inputs in section 3 before any new feature. A connected pilot on one test location and one ad account each on Google and Meta turns the whole of section 2 from "local" to "verified".
2. WhatsApp inbound before voice, now decided. Reportage runs WhatsApp by hand and has said no to automated calls. A text-first qualification agent reuses the brief, the approved facts, the scoring and the supervisor, and needs only the messaging policy and a template catalogue. It closes gaps 2 and 3 and is where every UAE vendor is winning.
3. Get the data-processing basis for hashed uploads. BD-70 proposes consent at collection and waits on Reportage's counsel. It unblocks outcome sync and audiences (gaps 5 and 6), which is the only route to the platforms optimising for qualified leads rather than form fills.
4. Chase Akarati for Done-Deal value and date (gap 10). The connection goes live 2026-11-14; until then Revenue and Leadership reports stay "Not available", which is the headline figure the CEO wants.
5. Portal connections and 800-number call tracking are the two deferred items with the largest share of leads behind them (gaps 7 and 11). Decide whether phase 7 starts with them.
6. Add the Trakheesi permit and Madmoun QR to pages and creatives before ADX publishes anything for an off-plan project (gap 8). It is a small field and a render rule, and a portal removes a listing without it.
7. Leave creative generation, publishing and channel breadth where they are until the team asks. Andromeda rewards creative volume, so expect the ask within a year. GoHighLevel's Workflows cover nurture journeys (gap 4) until ADX owns outreach end to end.
